AB Carboalkoxylation of 4-ClCH2C6H4CH2Cl with ROH (R = Me, Et, Me2CH, Me3C, Ph) and CO in the presence of PdCl2(PPh3)2 and N,N-dicyclohexylmethylamine gave diesters 4-RO2CCH2C6H4CH2CO2R as the major products. A similar reaction of 8 other bis(chloromethyl)arenes, e.g. I, II, and III (R = Cl), with MeOH and CO gave the corresponding diesters I, II, and III (R = CO2Me). Reaction parameters, such as auxiliary base, palladium complex catalyst, and solvent, were found to significantly affect the selectivity for diester formation.

AB Friedel-Crafts reaction of 2,5-R2C6H3CO2Et (R = H, Me) with α-chloro-α-(methylthio)acetate (I) in the presence of SnCl4 gave the α-methylthio-1,4-benzenediacetates II. The reactions of biphenyl, Ph2CH2, and Ph2O with excess I gave III (R1 = MeS, X = bond, CH2, O, resp.). Desulfurization of II (R = H, Me) and these III gave 2,5-R2C6H2(CH2CO2Et)2-1,4 and III (R1 = H). Me 4-(2-oxopropyl)phenylacetate was prepared by reaction of Me phenylacetate with α-chloro-α-(methylthio)acetone (IV) followed by desulfurization of the resulting product. Me 2-(2-furyl)propionate treated with IV in the presence of ZnCl2 gave furan V (R1 = MeS), desulfurization of which gave V (R1 = H).

AB The Wittig reaction of 1,4-C6H4(CHO)2 with equimolar Ph3P:CHOMe (I) orPh2P(O)CH2OMe (II) gave 4-OHCC6H4CH:CHOMe (III), whereas with excess I or II 1,4-C6H4(CH:CHOMe)2 was obtained. Hydrolysis of III gave 4-OCHC6H4CH2CHO. Similarly PhCHO and I gave PhCH:CHOMe, which was hydrolyzed to PhCH2CHO. 1,4-C6H4(CH2CHO)2 was also obtained in 50% yield by reduction of 1,4-C6H4(CH2CO2Et)2 by Dibal.

OS CASREACT 139:364597
AB A set of macrocyclic and open-chain aromatic ligands endowed with polyether side chains was prepared to assess the contribution of ether O donors to the binding of tetramethylammonium (TMA), a cation believed incapable of interacting with O donors. The open-chain hosts consisted of an aromatic binding site and side chains possessing a variable number of ether O donors; the macrocyclic ligands were based on the structure of a previously studied host, the dimeric cyclophane 1,4-xylylene-1,4-phenylene diacetate (DXPDA), implemented with polyether-type side chains in the backbone. Association to tetramethylammonium picrate (TMAP) was measured in CDCl3 at T = 296 K by 1H NMR titrns. The main contribution to the binding of TMA comes from the cation-π interaction established with the aromatic binding sites, but they unequivocally show that polyether chains participate with cooperative contributions, although of markedly smaller entity. Water is also bound, but the two guests interact with aromatic rings and O donors in an essentially noncompetitive way. An improved procedure for the preparation of cyclophanic tetraester derivs. was developed that conveniently recycles the oligomeric ester byproducts formed in the 1-pot cyclization reaction. An alternative entry to benzylic diketones also was provided that makes use of a low-order cyanocuprate reagent to prepare in fair yields a class of compds. otherwise uneasily accessible.

AB Polyesters containing aromatic moieties in the main chain have been synthesized by enzymic polycondensation (loss of acetaldehyde) of dicarboxylic acid divinyl esters with glycols under mild reaction conditions. Divinyl esters of isophthalic acid, terephthalic acid, and p-phenylenediacetic acid, and p-phenylenedimethanol were used as aromatic monomers. Effects of the polymerization conditions were systematically investigated in the polymerization of divinyl isophthalate and 1,6-hexanediol. Candida antarctica lipase afforded the polymer of the highest mol. weight Methylene chain length of the glycol affected the polymer yield and mol. weight Divinyl terephthalate was enzymically polymerized under similar reaction conditions, yielding polymers of lower mol. weight

LA English
AB A family of adaptive macrocyclic and acyclic "phane" esters has been designed to systematically investigate the interaction between aromatic rings and quaternary ammonium cations in the absence of superimposed contributions, such as hydrophobic, ion-pairing, macrocyclic, and preorganization contributions, to quant. evaluate the primary force at the origin of the cation-π interaction. The unprecedented association with open-chain and cyclic nonpreorganized aromatic hosts in solution is reported, including the remarkable case of binding to phenylacetate ester, that allowed the direct evaluation of the interaction with a single Ph ring. The magnitude of the cation-π attraction has been measured in CDCl3 at T = 296 K for picrate salts of acetylcholine (ACh) and tetramethylammonium (TMA), the latter showing the strongest interaction with cyclophane 1b (8.3 kJ mol-1). Results unambiguously confirmed that the basic driving force is a purely electrostatic attraction between the permanent charge of the cation and the aromatic ring. Exptl. standard binding free energies suggest that interactions of Ph rings are additive, each contributing 2 kJ mol-1 to the overall binding energy, up to a saturation limit in the range of 8 kJ mol-1, consistent with tetracoordinative capabilities of quaternary ammonium cations. Cooperative effects are displayed by the ester group, itself incapable of binding. The possible origin of the ester cooperativity is discussed.

LA English
AB Dispiro[2.2.2.2]deca-4,9-diene (I) was sublimed under a pressure of 0.1 mmHg and was pyrolyzed at 500°. When condensed on a glass surface at 20°, the pyrolyzed gas underwent spontaneous polymerization to give poly(1,4-phenylene-1,2-dimethylethylene) (II) as a film (.hivin.Mn = 3 + 104) in 10-20% yield and oligo(1,4-phenylenetetramethylene-co-1,4-phenylene-1,2-dimethylethylene) as an oil (.hivin.Mn = (2-4) + 102) in 50-70% yield. It was proposed for the formation of the polymer film that the diradical intermediate generated in the pyrolysis of I underwent an isomerization reaction to form 7,8-dimethyl-1,4-benzoquinodimethane which polymerized spontaneously to give II film.

I

AB The title compds. I [R1 = H or CH2CHR5(CH2)nOH, R5 = Ph, m-halophenyl, m-F3CC6H4, thienyl, or pyridyl; R2 = R5 ; R3 = H, Me; R4 = H, HO2CCH2, C1-4 alkoxycarbonylmethyl, C1-4 alkoxyethyl, or Ph C1-4 alkyloxyethyl) and their compatible physiol. salts having a catabolic effect are prepared for use in the treatment of obesity, **diabetes** mellitus, conditions involving increased protein degradation, and as food additives for obese animals. Thus, di-Et phenylmalonate in diglyme was treated with p-(2-ethoxyethoxy)phenethylamine, the solution stirred 48 h at 95°, cooled, the solvent removed, and the residue chromatog. purified to give Et [[[p-(2-ethoxyethoxy)phenethyl]carbamoyl]phenyl]acetate (II). The effects of II on the O consumption of albino rats showed its effectiveness in treating obesity.

CODEN: APDJBE; ISSN: 0374-5600
DT Journal
LA English
AB The urinary organic acids of spontaneously-occurring, insulin-dependent **diabetic** dogs under insulin therapy were compared with those of normal dogs, using a semi-automated sample injection-capillary gas chromatograph-computerized data processing system. The following acids were excreted in significantly greater amts. by **diabetic** dogs: 2-hydroxybutyric, 4-deoxytetronic, 3-hydroxybutyric, acetoacetic, arabinonic, erythronic, 3-deoxytetraonic, 2-deoxyribonic, lactic, pyruvic, 2-hydroxyisobutyric and 2-hydroxyisovaleric acids. Not only ketone bodies, but also the metabolites of threonine, 2-hydroxybutyric acid and 4-deoxytetronic acids appear to be important and sensitive markers for the metabolic state in insulin-treated **diabetic** dogs, although the changes in these acids are not always well correlated with each other.

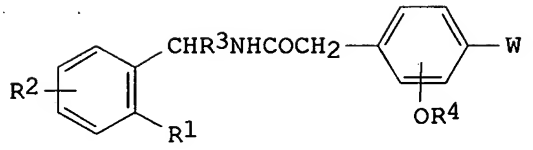
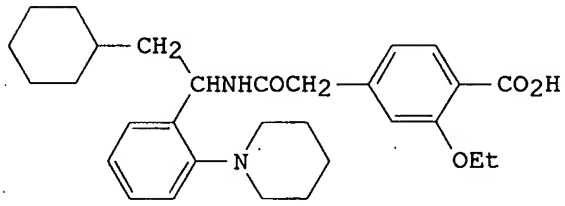
GI



I



II

AB The title compds. [I; R1 = (un)substituted alkylenimino; R2 = H, Me, MeO, halo; R3 = H, CO2H, alkoxycarbonyl, (un)substituted alkyl, Ph; R4 = H, alkyl, CH2:CHCH2; W = CHO, CO2H, R5CH2, R6CH2CH2, R7CH:CH; R5 = H, OH, CO2H, cyano; R6 = CO2H, cyano; R7 = CO2H, cyano, alkoxycarbonyl] and their enantiomers and salts were prepared as hypoglycemic agents. α-(Cyclohexylmethyl)-2-piperidinobenzylamine was amidated with 3-(EtO)-4-(EtO2C)C6H3CH2CO2H (68%) and the product was saponified to give 82% title compound II. In rats 0.5 mg II/kg orally reduced blood sugar 22% after 1 h and 45% after 4 h.

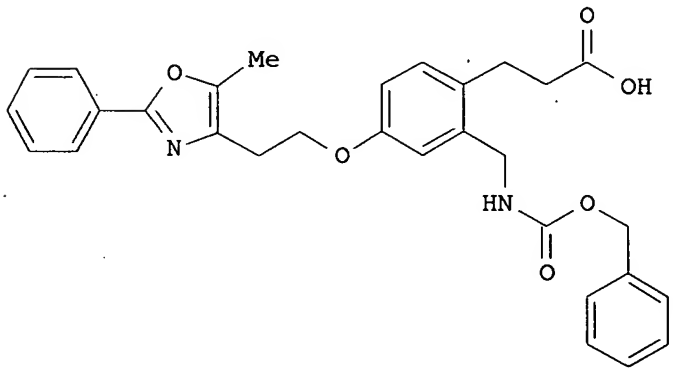
I



II

AB Title compds. I [wherein n = 2-5; V = a bond or O; X = CH2 or O; p = 0 or 1; m = 1-4; Y1 = (un)substituted (hetero)aryl; Y2 and Y3 = independently H, alkyl, or alkoxy; Y4 = (un)substituted alk(en/yn)ylaminoalkyl, carboxyaminoalkyl, (thio)ureidoalkyl, carbamoylalkyl, aminoalkyl,

alkoxyalkyl, alkylthioalkyl, or CN; R5 = H or alkyl; and pharmaceutically acceptable salts, solvates, hydrates, or stereoisomers thereof] were prepared as peroxisome proliferator activated receptor (PPAR) modulators (no data). For example, 3-[2-(1,3-dioxo-1,3-dihydroisoindolo-2-ylmethyl)-4-hydroxyphenyl]propionic acid tert-Bu ester was coupled with toluene-4-sulfonic acid 2-(5-methyl-2-phenyloxazol-4-yl)ethyl ester in the presence of Cs2CO3 in DMF. Deprotection of the amine using NaBH4 in isopropanol followed by conversion to the carbamate and deesterification gave II. I are useful for the treatment of Syndrome X, Type II **diabetes**, hyperglycemia, hyperlipidemia, obesity, coagulopathy, hypertension, arteriosclerosis, and other disorders related to Syndrome X, as well as cardiovascular diseases (no data).

I

AB Biol. active title compds. [I; n = 1, 2; m, q, p = 0, 1; R5 = alkyl; R9 = H, halo, alkoxy; A = (halo-, alkyl-, perfluoromethyl-, alkoxy-, perfluoromethoxy-substituted) Ph, (Me-, Et-substituted) cycloalkyl, 5-6 membered heteroarom. ring having 1-2 N, S, O atoms; X = CH2, Q = OR1, R1 = Et; or X = CH2CR12R13, CH2CH(NHAc), Q = OR1, R1 = H, alkyl; or X = CH2CH2, Q = NR10R11; R12, R13 = H, Me; 1 of R10, R11 = H, alkyl, OH, the other = H, alkyl], were prepared Thus, 4-(2-fluorobenzyloxy)acetophenone (preparation given) in THF and DMPU was treated with a solution of Li bis(trimethylsilyl)amide at -60°; after 10 min, tert-Bu bromoacetate was added followed by stirring for an addnl. 10 min and warming to room temperature for 4 h to give tert-Bu 4-[4-(2-fluorobenzyloxy)phenyl]-4-oxobutyrate. The latter was stirred with CF3CO2H in CH2Cl2 to give 4-[4-(2-fluorobenzyloxy)phenyl]-4-oxobutyric acid. Tested I showed antidiabetic activity in a variety of tests. I are useful in treatment of various metabolic disorders such as insulin resistance syndrome, **diabetes**, hyperlipidemia, fatty liver disease, cachexia, obesity, atherosclerosis and arteriosclerosis.

I

AB Optically active phenylpropanoic acid derivs. [(S)-I, and (R)-I] were prepared, and their affinities for peroxisome proliferator-activated receptor (PPAR)α and PPARγ were evaluated. Binding assay and cell-based reporter assay indicated that the activity of these compds. is enantio-dependent, and resides exclusively on the (S)-isomer.

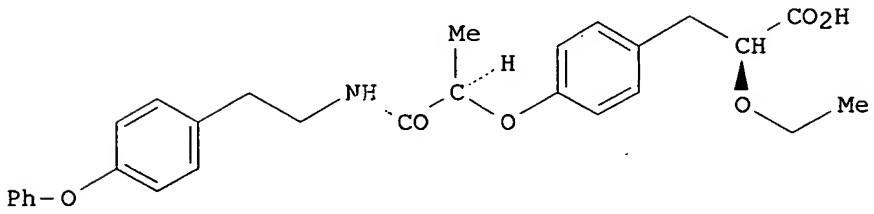
I



II

AB The present invention is directed to phenoxyalkanamides (shown as I; variables defined below; e.g. II), compns., and their use as peroxisome proliferator activated receptor agonists for treating and/or preventing **diabetes** mellitus and syndrome X. The binding and cotransfection efficacy values found for compds. of this invention that are useful for modulating a PPARα receptor are about <100 nM and >50%, resp. Although the methods of preparation are not claimed, .apprx.140 example prepns. of I are included. For example, II was prepared in 3 steps starting from (2S)-2-ethoxy-3-(4-hydroxyphenyl)propionic acid Me ester, (2S)-2-hydroxypropionic acid benzyl ester and involving intermediates (2S)-3-[4-[[(1R)-1-[(benzyloxy)carbonyl]ethyl]oxy]phenyl]-2-ethoxypropionic acid Et ester and (2S)-3-[4-[((1R)-1-carboxyethyl)oxy]phenyl]-2-ethoxypropionic acid. For I: R1 = H, C1-C8 alkyl, C3-C6 cycloalkyl, aryl-C0-4-alkyl, heteroaryl-C0-4-alkyl, aminoC1-C4alkyl, C3-C6 cycloalkylaryl-C0-2-alkyl, arylheteroC1-C8alkyl, -CHC(O)C1-C4 alkoxy, C0-4-alkyl-C(O)heteroC1-C8alkyl, and -CH2C(O)-R15R16. R2 = C1-C8 alkyl, C3-C6 cycloalkyl, aryl-C0-C4-alkyl, heteroaryl-C0-C4-alkyl, heteroC1-C6cycloalkylaryl, heteroC1-C6cycloalkylarylC1-C4alkyl, aminoC1-C4alkyl, C3-C6 cycloalkylaryl-C0-C2-alkyl, arylheteroC1-C8alkyl, C0-C4-alkyl-C(O)heteroC1-C8alkyl, -CH(C(O)OCH3)benzyl, and

-CH2C(O)R15''R16''. R1 and R2 together may form a heterocyclic ring which heterocyclic ring is (un)substituted with 1-3 substituents R1' and which heterocyclic ring is optionally fused with an aryl; E = C(R3)(R4)A, (CH2)nCOOR13, aryl-C0-C4-alkyl, thio-C1-C4-alkyl, thioaryl, arylC1-C4alkoxy, C1-C4alkoxy C1-C4alkyl, aminoaryl, and aminoC1-C4alkyl. R5 and R6 = H, C1-C8 alkyl, aryl-C0-C4-alkyl, heteroaryl-C0-C4-alkyl, C3-C6 cycloalkyl, aryl-C0-C2-alkyl, C3-C6 cycloalkyl-C0-2-alkyl, and -CH2C(O)R17R18.

WO 2003-US25004 A 20030807

AB Disclosed are immunogenic Nogo receptor-1 polypeptides, Nogo receptor-1 antibodies, antigen-binding fragments thereof, soluble Nogo receptors and fusion proteins thereof and nucleic acids encoding the same. Also disclosed are compns. comprising, and methods for making and using, such Nogo receptor antibodies, antigen-binding fragments, humanized and chimeric antibodies thereof, soluble Nogo receptors and fusion proteins thereof and nucleic acids or viral vector encoding the same for gene therapy. These Nogo receptor-1, antagonists are useful for inhibiting growth cone collapse of neuron, decreasing inhibition of neurite outgrowth, promoting survival of CNS neuron and axonal growth, and are therefore useful for treating multiple sclerosis, ALS, Huntington's disease, Alzheimer's disease, Parkinson's disease, **diabetes** neuropathy, stroke, traumatic brain injury or spinal cord injury.

GB 2002-16661 A 20020717

AB The invention is based on the discovery that the human protein referred to herein as INSP076 protein is a member of the cytokine receptor-type I family (hematopoietin receptor superfamily). Preferably, INSP076 functions as an IL-9 receptor or an IL-9 receptor-like protein. The INSP076 protein does not possess a transmembrane domain and accordingly the INSP076 protein is a potential soluble receptor. It is believed that the INSP076 protein may function as an IL-9 antagonist.
